

VINAY KUMAR PAMPANA

iOS Developer | Swift & SwiftUI Specialist
+91-9989597733 • Vinaykumar0919@gmail.com

PROFESSIONAL SUMMARY

iOS Developer with 5.6 years of hands-on experience delivering robust, user-facing mobile applications across fintech, banking, and healthcare domains including platforms serving millions of active users at PayPal and Citi Bank. Specialized in Swift, SwiftUI, and UIKit with a proven ability to own complete feature lifecycles: from architecture decisions and API integration to performance tuning and App Store release. Spearheaded large-scale migration of legacy Objective-C codebases to SwiftUI, applying Clean Architecture principles that improved long-term maintainability and reduced technical debt. Known for raising engineering quality through rigorous code reviews, junior mentorship, and cross-functional collaboration with backend, QA, and design teams. Early adopter of GenAI-assisted development leveraging Claude AI and LLM tooling to accelerate code refactoring, documentation, and delivery on complex enterprise projects.

TECHNICAL SKILLS

Languages	Swift 4, 5 & 6, SwiftUI, Objective-C
Frameworks	UIKit, Combine, RxSwift, Cocoa Touch, WebKit, CoreData, CoreAnimation
Architecture	MVC, MVVM, Clean Architecture, Singleton, Delegate/Protocol, Observer
Tools & Platforms	Xcode, LLDB Debugger, GitHub, Bitbucket, SourceTree, CocoaPods, SPM
APIs & Services	RESTful APIs, JSON/XML parsing, Apigee, Firebase (Analytics & Crashlytics), SSL Pinning
CI/CD & Monitoring	Jenkins, DataDog, Splunk, JIRA, Confluence, Atlassian
Integrations	Apple Pay, Google/Apple Maps, Facebook, Google & LinkedIn OAuth, WKWebView
Other	Claude AI / GenAI tooling, Prompt Engineering, Accessibility (ADA compliance), Glassbox

PROFESSIONAL EXPERIENCE

HCLTech

Aug 2025 – Present

Client: PayPal | Project: Oslo

Lead iOS Developer

- Led SwiftUI migration of PayPal's Oslo project, converting a large Objective-C and UIKit legacy codebase to SwiftUI — improving maintainability and cutting long-term tech debt significantly.
- Built and shipped AutoReload and App Switch modules in SwiftUI with a focus on modularity, scalability, and clean separation of concerns.
- Designed and implemented reactive **REST API** layers using URLSession and Combine, enabling real-time UI updates across split-screen multitasking sessions.
- Managed version control via **GitHub** and maintained **CI/CD** pipelines using **Jenkins** for consistent, reliable deployments.
- Applied Claude AI and GenAI tooling to accelerate legacy code analysis, refactoring, and documentation — reducing time-to-deliver on migration tasks.
- Built a comprehensive test suite covering unit, integration, and UI layers using XCTest, while implementing Firebase Analytics and custom event instrumentation to capture granular user activity metrics — reducing feedback loop between production behaviour and development decisions from days to minutes.
- Collaborated with Android engineers on parallel Jetpack Compose migration to ensure cross-platform design and functional parity.
- Optimized SwiftUI view rendering to reduce UI lag, improving perceived performance for end users.
- Led code reviews and worked closely with backend and QA teams to maintain Clean Architecture standards across the codebase.
- Mentored developers and collaborated with cross-functional teams to deliver new features.

ACABES International (A Unit of Arab Bank)**Aug 2024 – Apr 2025***Senior iOS Developer*

- Developed and maintained the Helios PLC banking application using Swift and SwiftUI, following Clean Architecture principles to build a scalable and fully testable codebase.
- Designed and implemented responsive UI components in SwiftUI across multiple iPhone and iPad form factors.
- Integrated **REST APIs** to fetch and parse user spending data, transforming raw financial payloads into structured UI-bound models surfacing actionable spending insights through clean, responsive views built in UIKit/SwiftUI
- Integrated **Apigee API** management layer to enable secure, rate-limited communication with backend services.
- Modularized the codebase to improve team velocity and reduce cross-team merge conflicts.
- Managed version control via Bitbucket and maintained **CI/CD** pipelines using Jenkins for consistent, reliable deployments.
- Managed end-to-end App Store submission including provisioning profiles, code signing, and build archiving via Xcode — and implemented App Thinning (slicing, bitcode, and on-demand resources) to reduce app bundle size and ensure users downloaded only the assets relevant to their device.

Wipro Technologies**Mar 2021 – Apr 2024****Client:** Citi Bank*Software Engineer – iOS Developer*

- Part of the Crashlytics team responsible for triaging, debugging, and resolving critical live production crashes on the Citi mobile app used by millions of customers.
- Used Firebase Dashboard and Splunk production log analysis to trace user-session URIs and identify root causes of crashes and functional bugs.
- Resolved JIRA-assigned incidents on a rolling basis, coordinating with Testing, Performance, and Framework teams to validate fixes did not introduce regressions.
- Pushed reviewed code changes via Bitbucket, adhering to team branching strategy and PR standards.
- Built a comprehensive test suite covering unit, integration, and UI layers using XCTest, while implementing Firebase Analytics and custom event instrumentation to capture granular user activity metrics reducing feedback loop between production behaviour and development decisions from days to minutes.
- Conducted systematic performance profiling using Xcode Instruments including Leaks, Allocations, VM Tracker, and Memory Graph Debugger to detect retain cycles, zombie objects, and excessive memory footprint; resolved identified issues to bring peak memory usage within acceptable thresholds and improve app stability scores.
- Managed version control via Bitbucket and maintained **CI/CD** pipelines using Jenkins for consistent, reliable deployments.
- Mentored junior iOS engineers, onboarding them to team workflows, coding standards, and debugging practices.

FarShore Partners Inc.**Aug 2019 – Apr 2020****Client:** Intuitive Surgical*Software Engineer – iOS Developer*

- Built a clinical iOS application for Intuitive Surgical enabling physicians to log and track patient records from initial consultation through post-operative discharge.
- Architected the app using MVVM to ensure clean separation of data, UI, and business logic, making the codebase testable and maintainable.
- Implemented CoreData for local persistence, Alamofire for API communication, and WKWebView for embedded content.
- Worked directly with the client on design and feature requirements, translating clinical workflows into intuitive mobile UX.

FarShore Partners Inc.**Jan 2020 – Apr 2020****Client:** FinAskUs*Software Engineer – iOS Developer (Contract)*

- Contributed to the FinAskUs mutual fund investment platform, building user-facing modules for wealth management and fund selection.
- Implemented CoreAnimation-driven transitions and SDWebImage for performant image loading, improving overall app fluidity.
- Collaborated with project leads to meet milestone deadlines and participated in direct client communication on UI/UX decisions.
- Managed end-to-end App Store submission including provisioning profiles, code signing, and build archiving via Xcode — and implemented App Thinning.

EDUCATION

Bachelor of Technology – Electronics and Communication Engineering

Jawaharlal Nehru Technological University Kakinada (JNTUK)
